“Dubai Building Code” Issued by Dubai Municipality Incorporating DEWA Regulations for Electrical Installations

Dear Customers,

The “Dubai Building Code” issued by Dubai Municipality, aims to unify the building design reference across Dubai to reduce construction cost and create a building code that is easy to use and clearly stipulates the minimum requirements.

We wish to highlight that the relevant clauses applicable for electrical design, specified in the DEWA Regulations for Electrical Installations are incorporated in the “Dubai Building Code”, mostly under the Part. G and Part. K (updated adding more illustration wherever applicable). Compliance with the Dubai Building Code shall be mandatory and verified during the drawing submissions for DEWA design approval for all projects in Dubai.

In order to ensure safety , the existing DEWA Regulations for Electrical Installations Edition 2017, includes the applicable clauses related to the operation, periodic inspection & maintenance of the electrical installations also, , the above requirements and guidance will be issued separately by DEWA for easy reference.

The direct link for accessing the “Dubai Building Code” is given below:
